## Skills

---

HTML

CSS

Javascript

React

Git/Github

## Projects

---

### Mini Fintech Application [🔗](#)

HTML, CSS, Javascript.

A mini Fintech application that could be used to send money to my bank account either via credit card or bank transfer. This was made with HTML, CSS and Javascript. The UI was inspired by Paga (a big Fintech company in Nigeria). I used Paystack's API to take care of the payments. (Paystack is another big Fintech in Nigeria). The username to access the payment page is 'kronika with a small k' from the homepage. This app matches and confirms bank account numbers and credit cards.

### E commerce Store for a Pizza Shop. [🔗](#)

HTML, CSS, Javascript, React, Firebase

Taking inspiration from DodosPizza, I recreated the website with React. I added a custom pizza builder so that clients who are unsatisfied with the available menu could make their own Pizzas in real time and order them. I used firebase as the backend to receive orders but the whole front end was done in React.

## Education

---

08/2013 – 09/2017

**Regional Maritime University, Ghana**

*Bsc Marine Engineering*

## Professional Experience

---

09/2017 – 03/2020
